"The Carrier State Situation at a Specific Time Period of a Dysentery Epidemic."

Sofia, Voenno Meditsinsko Delo, Vol 18, No 2, 1963; pp 42-48.

Abstract: Screening for carriers among soldiers bivouacked in a village where a dysentery epidemic was present in July 1962 brought about the detection of 20 carriers. Detailed data are given indicating that virtually all of these carriers had subclinical degrees of dysentery as revealed by minor pathologic symptoms or proctoscopic changes. Need for periodical screening in general and for thorough treatment of the carriers is stressed. Five tables; 2 Bulgarian, 1 Polish, 1 Hungarian, 16 Soviet references.

 ding on Their Live Weight at Birth.
 ORIG. PUB. : Zootekhnicheskii Vestn. 1959, 14, No. 4,
 15-16.
 ABSTRACT : The possibility of compensating growth and
 development in calves raised under unfavo-
 rable conditions was studied by taking into
 account their live weight and carcass weight
 at birth. The records of some farms on the
 Krasnodar, Stavropol, and the Red Garden varia-
 ties, as well as the experimental data were
 analyzed. Three groups of calves, each of bot-
 toms from three farms participated in the
 experiment. The 1st experimental group com-
 prised calves with a low weight at birth;

Title : The Stimulating Effect of Strophanthin Upon the
Heteroagglutinin Titer in Rabbits.

Orig Pub : Izv. In-ta biol. D"lg. AN 1956, 7, 279-291

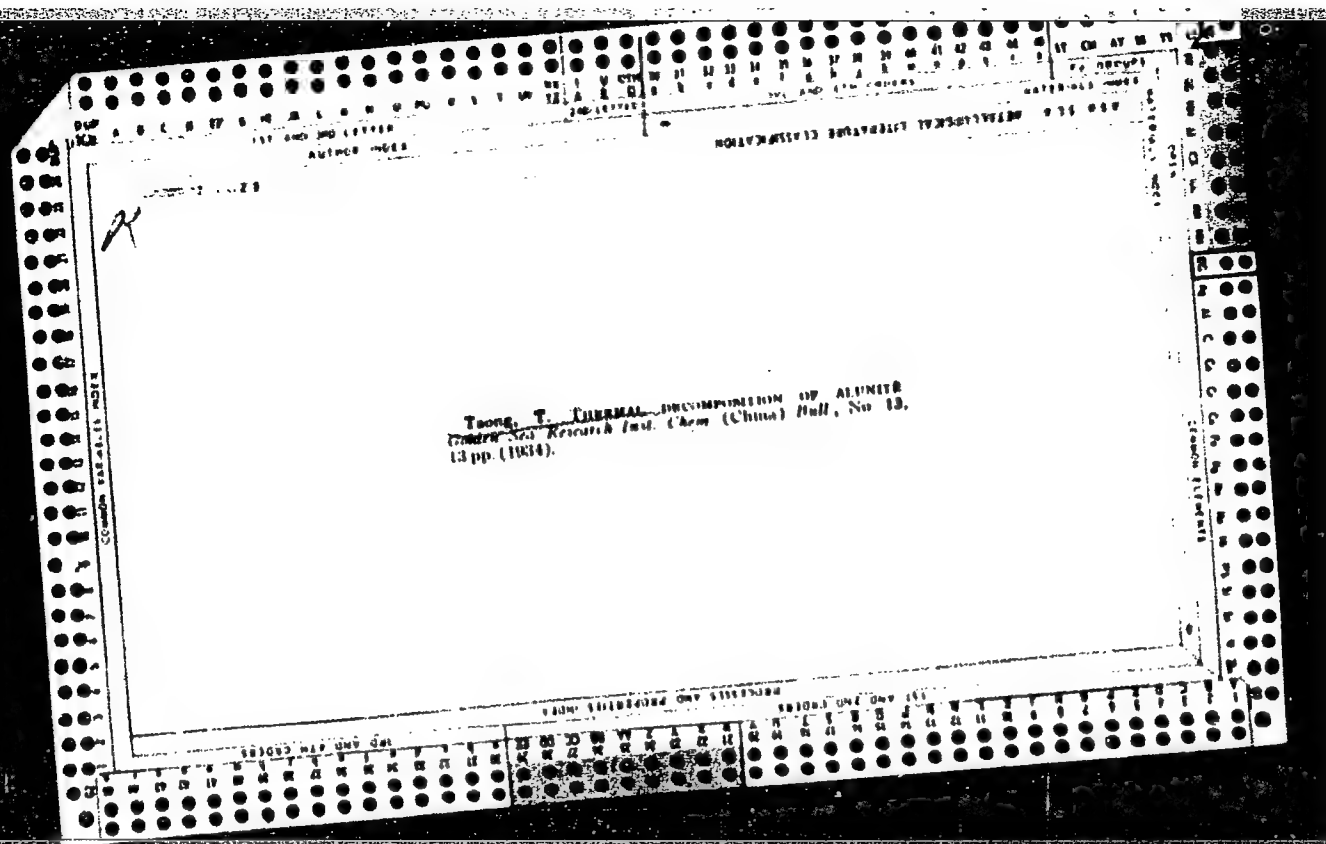

Abstract : The administration of 42 gamma of strophanthin to rabbits 10 days after immunization with human erythrocytes (the titer of agglutinins 1:600, that of conglutinins 1:160) increased the titer of agglutinins to 1:64 and the titer of conglutinins to 1:320 - 1:640. This confirms one of the conclusions of M. Popov's theory (M. Popov, Obshcha biologiya, Lekoopizdat, 1946, 330) which states that the specific action of some drugs may be based on their general stimulating effect upon cellular metabolism.

"Effect of Some Antibiotics on the Mitotic Activity and Karyotype of Human Leukocytes Cultivated in Vitro"

Sofia, Suvremenna Meditsina, Vol 17, No 12, 1966, pp 999-1010

Abstract: The effects of tetracycline and chlortetracycline on the mitotic activity and karyotype of leukocytes from human peripheral blood cultivated in vitro and blastic transformation of cultivated lymphocytes were studied. Division of the leukocytes was stimulated with phaseolosazin (a type P hemagglutinin from a Bulgarian variety of *Phaseolus vulgaris*). The antibiotics had an inhibiting effect on the mitotic activity of the leukocytes. Changes in the karyotype under the influence of the antibiotics occurred in 32-40% of the cultivated cells that were treated. The chromosomal aberrations produced were both of the numeral and structural type. The predominant structural changes were breakages of chromatids and the principal changes with respect to the number of chromosomes trisomics. The effect of antibiotics on the mitosis of lymphocytes is of importance from the standpoint of development of immunity. Figures, graph, table, 24 references (1 Bulgarian, 3 USSR, 20 Western). Russian and English summaries. Manuscript received Jul 66

Title : Results of the Work on Creating a New Breed of Hens

Orig Pub : Zhivotnovodstvo i vet. delo, 1957, 11, No 9, 25-33

Abstract : To establish a new breed of hens, local hens reared in optimal conditions were cross-bred with elite roosters of the Rhode-Island breed. The local hens had an average weight of 1.819 kg, and a laying capacity of 133.5 eggs, with the eggs weighing 56.9 grams. The Rhode-Island-breed hens had an average weight of 2.346 kg and a laying capacity of 178.4 eggs, with the eggs weighing 56.5 grams. The mean egg laying capacity of the first cross-bred generation amounted to 168.8 eggs, that of the second generation, 177.9 eggs, and that of the third generation, 172.9 eggs, weighing 56.4, 56.5 and 56.8 grams, respectively. The mean weight of the hens in these respective generations was 2.048,

2.073 and 2.163 kg. The mortality of the birds declined from 14.1-11.6 percent at the outset to 9.8 percent in the cross-bred offspring. Beginning with the 2nd or 3rd generation the cross-bred individuals of the desirable type were inbred. In 1956 the hens obtained from reproductive cross-breeding had an average weight of 2.423 kg, with an average laying capacity of 196.7 eggs weighing an average of 55.4 grams. In the same year the Rhode Island hens laid an average of 174.2 eggs weighing an average of 58.3 grams. The hens of this new breed group are distinguished by their increased capacity for survival, and their eggs, by improved hatching qualities. -- K.M. Lyutikov

"The Problems of Field Psychoneurology in the Military Zone."

Sofia, Voenno Meditsinsko Delo, Vol 21, No 2, 1966, pp 7-12

Abstract [author's Russian summary, modified]: A significant increase is predicted in the number of psychoneurological cases in the event of a modern war, and the resulting difficulties for the Army Medical Service are outlined. The problem is discussed of extending medical aid to such victims during their evacuation from a military zone. The need is underscored for the preliminary training of medical corpsmen and their instructors in the fundamentals and basic rules of extending psychoneurological first aid. 17 Soviet-bloc references.

"Considerations Pertaining to the Medical Safeguarding of Persons Affected by Poisons with a Neuropsychic Action"

Sofia, Voenno Meditsinsko Delo, Vol 21, No 3, Jun 66, pp 9-13

Abstract: It is pointed out that application of modern weapons, specifically of nerve gases and other war gases, may lead to nervous and mental disturbances in persons exposed to their action. Furthermore, work is being conducted in Western countries, particularly in the USA, on substances with a military potential which produce mental disturbances and have an action of the type of hallucinogens, depressants, or super-excitants. Under the circumstances, attention should be paid to the treatment of psychotic states produced by poisons applied in wartime. In the treatment of psychomotor excitation, single intramuscular injections of largactyl in a dose of 50-100 mg will have a good effect. Depending on pathogenetic

TITLE: On the Book by Stepanov, N. N. "Geodesy"
(O knige N. N. Stepanova "Geodeziya")

PERIODICAL: Meteorologiya i Gidrologiya, 1958, Nr 1, pp. 61-62 (USSR)

ABSTRACT: This book was by the Ministry for University Education of the USSR admitted as textbook for hydrometeorological colleges. It is distinguished by brevity, is based on modern data of geodetical science and engineering, has a simple mode of expression, but has a number of deficiencies. Among the latter is above all the building of the book. The author does not observe the principle of the subsequent transition from simpler to more complicated problems. The book has too few figures, moreover a considerable part of the figures given is very schematic, primitive and often unsatisfactorily done. In some definitions, in the expression of some formulae it is not clear enough etc. In the tables and in the text of the book completely wrong/data are in some cases given. This book is no example of a perfect textbook for geodesy for colleges of the non-geodetical line.

TITLE: Radiation acceleration of a plasma

SOURCE: AN SSSR. Fizicheskiy institut. Trudy, v. 32, 1966. Fizika plazmy (Plasma physics), 60-79

TOPIC TAGS: plasma acceleration, HF oscillator

ABSTRACT: The article is of the review type (41 literature references) and surveys work done in the field in the Soviet Union, Japan, the United States and France. After a general mathematical introduction to the subject, the authors describe the first experiments on the radiation acceleration of plasmas using superhigh frequency generators. Detailed diagrams are given of two such systems. Detailed consideration is given to the investigation of the special characteristics of the interaction of superhigh frequency oscillations in a plasma, including the effect of plasma resonance, and the acceleration of a plasma by the action of the gradient of a superhigh frequency field. The two final sections deal respectively with the acceleration of a plasma in

TITLE: Interaction of plasma bunches with an electromagnetic wave

SOURCE: Atomnaya energiya, v. 18, no. 1, 1965, H-18

TOPIC TAGS: plasma clot, plasma clot acceleration, plasma clot
radiative acceleration, H sub 01 wave, H sub 11 wave

ABSTRACT: Preliminary experimental results are given of an investigation of the radiative acceleration of plasma in circular waveguides. The investigation was conducted in a 10-cm range with H₀₁ and H₁₁ waves. Different plasma injectors were used. Plasma bunches with an initial particle concentration of 10¹² cm⁻³ and higher were injected with a 5 x 10⁶ cm/sec velocity from a spark source or were generated directly on the axis of the waveguide by means of a plasma source at a pressure drop of 10⁻⁷—10⁻⁶ mm Hg of the operating vacuum in an accelerator. Electric detectors, superhigh-frequency methods, and an electrostatic analyzer of particle energy were used for the investigation.

Card 1/2

L 23868-65

ACCESSION NR: AP5003998

tion. External magnetic fields with various configurations were used to confine the plasma. Accelerated ions with energies exceeding 10 kev were obtained regardless of the type of wave in the waveguide or the kind of plasma injector. The energy of the accelerated ions increased as the superhigh-frequency power increased. The total number of accelerated particles was of the order of 10^{12} . Maximum energy was 50 kev. The application of nonhomogeneous fields for the stabilization of the transverse dimensions of plasma bunches was shown to be feasible. There were practically no plasma losses on the waveguide walls when quadrupole or sextupole magnetic fields were used. Orig. art. has: 7 figures. [JA]

TITLE: Radiational acceleration of plasma
SOURCE: International Conference on High Energy Accelerators. Dubna, 1963.
Trudy. Moscow, Atomizdat, 1964, 1017-1022
TOPIC TAGS: high energy accelerator, plasma acceleration, plasma waveguide
ABSTRACT: The practical realization of the radiational method of plasma acceleration (Veksler, V. I. CERN Symposium. 1956; *Atomnaya energiya* 2, 427, 1957) is connected with the utilization of a different kind of waveguide structure, within which a plasma bunch moves under acceleration by an electromagnetic field. Two such waveguide structures, differing in type of accelerating wave and in method of plasma injection, were produced recently in the Physics Institute, AN SSSR. Initial experiments showed that radiational acceleration of plasma was achieved both of the structures. At the same time the Radiotechnical Institute, AN SSSR,
Card 1/2

L 4241-66

ACCESSION NR: AT5007972

carried out a theoretical study of the possibilities of the radiational method. The present report contains a brief exposition of all these investigations, under the two headings of: experimental results and theory of radiational acceleration. Both waveguide structures employed one and the same super high-frequency oscillator of 10 cm range which operated in the single-stage pulse regime of 8 microseconds duration; the average density of power flux through tube cross-section did not exceed $8 \cdot 10^3$ watts/cm², and the KSVN of the entire waveguide system (without plasma) was not worse than 1.3. The accelerating waveguides were tubes of circular cross-section with walls of noncorroding steel 1 mm thick; the vacuum in the tubes was of the order of 10^{-7} to 10^{-6} mm of mercury. The forces of the radiational pressure which act upon the plasma bunch are found by proceeding from the conservation laws. In the plane electromagnetic wave propagated in free space the density of pulse flux equals the average energy density. Orig. art. has: 7 figures, 26 formulas.

SCV/5333

Pchelintseva, G. M., ed.

Uskoriteli; sbornik statey (Accelerators; Collection of Articles) Moscow, Atomizdat, 1960. 121 p. Errata slip inserted. 5,000 copies printed.

Scientific Ed.: B.N. Yablokov; Ed.: G.M. Pchelintseva; Tech. Ed.: N.A. Vlasova.

PURPOSE: This collection of articles is intended for scientists and engineers engaged in the construction and operation of particle accelerators.

COVERAGE: These original articles treat specific problems arising in the operation of present-day accelerators, particularly linear electron accelerators. A new accelerator put into operation at the Ukrainskiy fiziko-tekhnicheskiy institut (Ukrainian Physicotechnical Institute) is described, and problems in the dynamics of particles in linear electron accelerators are discussed. New methods are discussed for the extraction of particles from accelerators. Problems associated with the shaping of permanent magnetic fields and the acceleration of multicharge ions are also treated. The changeover of the series cyclotron to the phasotron acceleration mode with a view to increasing the energy of accelerated particles

Card 1/3

Accelerators; Collection of Articles

80V/5333

is described, and some problems connected with the bunching of particles are elaborated. No personalities are mentioned. References accompany each article.
